Metadata-driven automation
to accelerate project delivery

Client Profile

The customer is the largest provider of personal and commercial insurance in Canada, including automobile, property and liability.

✅ Results

"erwin Mapping Manager gives [us] that reliability factor, as an agile data integration platform to automate, accelerate and govern data integration processes."

"

Enterprise Architect

⧉ Challenge

Managing data mappings for the enterprise data warehouse via Microsoft Excel spreadsheets had become impossible as the data mapping rules changed across several releases. The customer was looking for a solution to automate data mappings and govern each phase of data integration to save time and reduce required resources.

⚙ Solution

After evaluating many vendor tools in the space, the customer selected both erwin® Mapping Manager and the erwin Automation Framework.

The erwin solutions increased operational efficiency for data warehouse projects by providing a central repository to store all enterprise data mappings, making the data integration process more efficient and collaborative across department teams.

erwin's custom code automation templates saved hundreds of thousands of dollars in code generation and lowered development costs, enabling the organization to achieve more work in less time with fewer resources.

erwin also helped with version mappings and importing existing Excel-based mapping specifications, viewing data lineage across the enterprise, and performing impact analysis.

> ROI achieved within the first 12 months

> Accelerated mapping process via drag-and-drop feature

> More work achieved in less time with fewer development resources
