

What's New in erwin Data Intelligence 15 by Quest

Confidently deploy AI models and maximize use of trusted data across your business with erwin Data Intelligence 15.

Automated AI model certification: deploy AI with confidence

erwin Data Intelligence 15 adds to its AI governance capabilities with automated certification of AI models and associated data as production-ready. Track model maturity automatically through a centralized, best-practices certification process based on the erwin by Quest 7 steps 'model to marketplace' value framework.

- Gain clear visibility into data origin, readiness for use, governance required and ongoing reliability of AI models and associated data
- Flexibly fit certification criteria to your unique AI governance approach
- Leverage built-in automation and data intelligence inside of erwin to make certification practical and well-supported

Personalized marketplace insights in erwin Data Marketplace

Included within erwin Data Intelligence, erwin Data Marketplace now offers personalized asset insights for users across your organization. When entering the data marketplace, users are greeted by an interactive landing page with asset insights relevant to their unique roles and needs.

- Quickly customize the personalized discovery page with ready-to-use page widgets designed for quick view insights
- Filter insights by asset types, such as data products, AI models, business terms, policies and more, and instantly drill-down to the needed detail for the task

Expanded data value scoring to smartly tackle data valuation

Take advantage of extended data value scoring criteria to automatically generate data value scores ensuring valuable, trusted data and AI assets are easy to spot by consumers and to lay the groundwork for data monetization.

- Select up to nine scoring criteria and weight each criteria to fit to your organization's unique view of data value
- Make it easy to recognize high-value data in erwin Data Marketplace with gold, silver and bronze indicators

Also, in erwin Data Intelligence 15

- Use the **new erwin Standard Data Connector for Microsoft Dataverse** to ingest Dataverse metadata into the data catalog for fuller data landscape visibility and to take advantage of data quality, data marketplace, and AI and data governance capabilities inside of erwin Data Intelligence.
- And more. View the erwin Data Intelligence 15.0 release notes for all enhancements and more detail on the [Quest Support Portal](#).
